

Thanks for your order!

Electroniq Buttons Boutique*
(Dated: August 26, 2026)

Hi! Thanks for ordering a manual preconditioning kit from us! This has been a wild ride: in March, we isolated the CAN messages necessary for preconditioning, and today we're shipping you a kit. We're still learning, so we would appreciate any feedback you have: feel free to email us at info@electroniqbuttons.com. It's also important to us that everything works. Please email us at support@electroniqbuttons.com if that's not the case.

Included in the preconditioning kit:

1. 1 WiCAN-OBDD-C3 flashed with the latest stable firmware
2. 1 custom head unit harness
3. Mounting supplies:
 - (a) 1 70mm OBD mount bracket
 - (b) 2 pieces of double-sided adhesive (1 extra in case of mishaps; email us if you need more)
 - (c) 4 zip ties
4. (if selected) Installation tools:
 - (a) 4 pieces of trim removal tools
 - (b) 1 Phillips #2 head allen key

We will be releasing lots of firmware updates, so we hope you'll join either our email list Figure 1c or Fluxer community Figure 1d to receive notifications of updates. There may be much nicer firmware available than what's on your WiCAN, so check out our releases, Figure 1e, and the update guide, Figure 1f.

Please check out the install guides, Figure 1a and the manual, Figure 1b. Note that these are live documents and will be regularly updated. Happy preconditioning!
